- \$950 Polished Nickel, Satin Nickel, Polished Chrome

Back Stabilizing bracket Support

Front Elevation

Stabilizing brackets are recommended in commercial spaces. While the ceiling mounting bracket is very strong if the blocking above the bracket is installed securely, there may be a little movement at the bottom while cleaning the mirror. It is not necessary to use stabilizing bracket in a residential setting, but then it's best to hold the bottom while wiping the mirror.

There are two types of stabilizing brackets; one mounts to the wall or window mullion behind the mirror and the other one mounts to the back of the washstand. They can be customized to meet your size requirements. Or if you want another design for the bracket, send us a drawing and we will price it for you.

**One Madison LED Mirror** is an energy-efficient, ceiling-mounted mirror with a slender tubular structure. The low-voltage, high-brightness, LED strips behind etched glass on each side of the mirror, use only 80 watts, provide approximately 1,334 lumens and have a lifetime of 50,000 hours.

This mirror was made for **One Madison**, a luxury condominium tower located in New York City's Flatiron District. The mirrors, which hang above the bathroom vanities in front of the full-height windows, enhance the incredible views of the surrounding city skyline.
